## EDUCATION

### UNIVERSITY OF CALIFORNIA, IRVINE

Bachelor of Science in Computer Science: GPA: 3.3 / 4

09/2019 - 06/2021

## SKILLS

- **Programming Languages:** Java, Python, C, C++, JavaScript
- **Web Technologies:** React Native, React, Node.js, TypeScript, HTML5, CSS3, Bootstrap, TailWind, jQuery, Material UI
- **Databases:** MySQL, DynamoDB, PostgreSQL, Redis Cache, SQLite, MongoDB
- **Version Control and Scripting:** Git, Bash Shell Scripting
- **CI/CD:** Jenkins, Docker, Kubernetes, Helm, Terraform, AWS CloudFormation, OpenShift/Tekton, Github Actions
- **Architectures and Frameworks:** Microservices(Spring Boot, Spring Cloud Services), Hibernate, REST, Serverless (AWS Lambda)
- **Application Monitoring, Reporting and Analysis Tools:** AWS X-Ray, AWS CloudWatch, Splunk
- **Languages:** English (Fluent), Armenian (Native), Arabic (Native)
- **Other:** Teamwork, risk management, adaptability, verbal and written communication, and critical thinking skills

## WORK EXPERIENCE

### AAA | Full-Stack Engineer | Irvine, CA

01/2023 - present

Online Bind Team - **Auto Club Enterprises**

(JavaScript, **UI/Front-end** - React, Redux, **API / Middleware** - Typescript, Node.js, **AWS** - IAM, System Manager, VPC, API Gateway, Lambda, DynamoDB, S3; **CI/CD** - CodePipeline, CodeBuild, CodeDeploy, CloudFormation, CloudFront, Github Actions, **Testing** - Jest, Mocha)

- Migrate workflow-driven & event-driven architecture microservices from PCF to AWS lambda
- Utilized SOLID principles to design code and infrastructure components such as lambda execution layer, data sources, mappers, managers, brokers, and factories, ensuring a scalable and maintainable system architecture
- Led transition from Elasticsearch to MongoDB, connecting it to AWS Lambda endpoints and managing the CI/CD connections
- Develop new features for the automobile and renters insurance purchase platform services for new customers
- Collaborate with cross-functional teams to follow TDD and eXtreme Programming methodologies
- Contribute to platform architecture, microservices, DevOps, Automation, service delivery, quality assurance and development tools/process management, Data Structures and Algorithms, Cloud Computing, Agile & Scrum development

### Ford Motors | Software Engineer | Irvine, CA

01/2022 - 12/2022

Autonomous Vehicles Orchestration UI/UX Backend development team - **Ford Next**

(Java, **API / Middleware** - Spring Boot, **GCP** - CloudRun, Pub/Sub, Firestore, ApiGee; **AWS** - IAM, lambda, SQS, SNS, S3, API Gateway, DynamoDB, PostgreSQL, RDS, Redis Cache; **CI/CD** - CloudFormation, Helm, Docker, Jenkin, Kubernetes, Terraform, SonarQube, OAuth2.0, **Testing** - JUnit, Mockito)

- Developed and migrated Java microservices from AWS Lambda to GCP CloudRun using Spring Framework for real-time data processing
- Utilized asynchronous Pub/Sub communication, gRPC and WebSocket for real-time data exchange between the microservices
- Secured microservice endpoints by integrating OAuth, OpenID Connect, and JWT with Spring Security in the applications
- Configured and integrated 42Crunch, SonarQube, and Fossa scans into the Tekton pipeline to perform API security scanning, code quality analysis, and license compliance checks respectively
- Optimized data transformation for 3 services, reducing latency by 95% and improving system performance by 20%
- Designed and implemented automated testing and deployment processes with Openshift, Tekton and Terraform, reducing deployment time by 40% and improving reliability of the system

### Freelance | Software Engineer | Irvine, CA

03/2021 - 12/2021

(Node/Javascript, Expo, GCP - CloudRun, Pub/Sub, Firestore, React Native Elements, React Native Material UI)

- Developed a proof-of-concept react-native application focused on addressing business/portfolio contact and media sharing
- Integrated user authentication and authorization using Firebase, added sign-in options through popular platforms such as Facebook..etc

## PROJECT WORK

### Fabflix | Code

06/2021

Full-stack web & mobile application allows user to browse, search, and purchase from 21,000+ movies (Java, JDBC, MySQL, JavaScript, HTML5, CSS3, Bootstrap, jQuery, AJAX)

- Planned search optimization techniques, focusing on caching users' query to shorten movie and star search time from 4 seconds to 1; Populated content with full-text and autocomplete search on modules
- Implemented password authentication login filter servlet, ReCAPTCHA, HTTPS, bot detection, cookies, Prepared Statements, and load balancing via master-slave instances for 500+ users' personal information security and scalability
- Extracted and converted XML raw data into CSV file to shorten insertion time of 200,000 movies from 30 min to 5 sec
- Deployed WAR files via AWS and Google Cloud; Installed and configured Tomcat and Apache HTTP server
